Backup e Recuperação

1 INTRODUÇÃO

Para o desenvolver da experiência foi usado o virtualizador Oracle Virtual Box Versão 7.1.4 r165100 (Qt6.5.3) com a seguinte imagem SERVER_EVAL_X64_FRE_en-us.iso. Não esquecer que é necessário ligação à internet e as configurações necessárias para permitir virtualização no Sistema Operativo.

A experiência consiste na Introdução do tema de Backups num ambiente Windows Server. Para isso é inicialmente necessário a criação de um Disco Virtual que representará um espaço próprio para o armazenamento de Backups. Após Inicializar a Virtual Machine é pretendido instalar a ferramenta de backups do Windows Server e criar um backup a um ficheiro previamente criado através desta ferramenta. Após o sucesso na criação deste backup e para terminar a experiência será demonstrado a remoção do ficheiro a qual foi dado backup e a recuperação desta através da utilização do backup anteriormente criado.

2 EXPERIÊNCIA

2.1 PRÉ-EXPERIÊNCIA – CRIAÇÃO DE DISCO

No Virtualizador VirtualBox selecionar a máquina virtual e clicar em definições -> armazenamento -> botão da figura;

(poderá aparecer assim)

Clicar em Criar, Selecionar VDI e clicar em Next;

Clicar Next;

Selecionar 20,00GB e Clicar em Terminar;

Selecionar o Disco Criado e Clicar em Choose;

Ao inicializar a Máquina Virtual Clicar com o botão direito no Windows Key e abrir o Disk Management;

Caso este pop-up apareça Clicar em Next;

Na zona a tracejado do **Disk1 (Disco não alocado)** Clicar em “New Simple Volume” e **nas seguintes páginas** Clicar em Next até Clicar em Finish.

2.2 CRIAÇÃO DO FICHEIRO A DAR BACKUP

Clicar com o Botão Direito no Ambiente de Trabalho do Windows Server e Selecionar New -> Text Document e preencher o documento com algum texto.

2.3 INSTALAÇÃO DA FERRAMENTA WINDOWS SERVER BACKUP

Abrir o Server Manager e Clicar em “Add Roles and Features”

Clicar em Next;

Selecionar Role-Based or feature-based installation e Clicar em Next;

Clicar em Next;

Clicar em Next;

Selecionar Windows Server Backup e Clicar em Next;

Clicar em Next e Install. Esperar pela conclusão da Instalação e Clicar em Close;

2.4 CRIAÇÃO E CONFIGURAÇÃO DO BACKUP

Clicar em Tools e Clicar em Windows Server Backup para abrir o wbadmin;

Clicar em Local Backup , depois em Backup Once -> Different options e Next;

Clicar em Custom;

The screenshot shows the 'Backup Once Wizard' window, specifically the 'Select Backup Configuration' step. The window has a title bar with a close button. On the left is a sidebar with a tree view containing the following steps: 'Backup Options', 'Select Backup Configurat...', 'Select Items for Backup', 'Specify Destination Type', 'Confirmation', and 'Backup Progress'. The 'Select Backup Configurat...' step is currently selected and highlighted in blue. The main area of the wizard is titled 'Select Backup Configuration' and contains the question 'What type of configuration do you want to schedule?'. There are two radio button options: 'Full server (recommended)' and 'Custom'. The 'Custom' option is selected, indicated by a blue dot and a mouse cursor pointing at it. Below the 'Full server' option, there is descriptive text: 'I want to back up all my server data, applications and system state.' and 'Backup size: 23.59 GB'. Below the 'Custom' option, there is descriptive text: 'I want to choose custom volumes, files for backup.' At the bottom of the wizard, there are four buttons: '< Previous', 'Next >', 'Backup', and 'Cancel'. The 'Next >' button is highlighted with a blue border.

Clicar em “Add Items” e Disk (C:) -> Users -> vboxuser (Ou o nome de utilizador que definiu) -> Desktop e seleccionar o Quadrado do New Text Document e Clicar em Next;

Clicar em Next;

Selecionar o New Disk (E:) e Clicar em Next;

Clicar em Backup e após o sucesso da sua criação clicar em Close;

2.5 REMOÇÃO DO FICHEIRO E RECUPERAÇÃO DO BACKUP

Remover Pasta e Esvaziar o Lixo;

Abrir o wbadmin (do Server Manager), Clicar em Recover e Next;

Selecionar o Backup e clicar Next;

Recovery Wizard

Select Backup Date

Getting Started
Select Backup Date
Select Recovery Type
Select Items to Recover
Specify Recovery Options
Confirmation
Recovery Progress

Oldest available backup: 11/21/2024 2:49 PM
Newest available backup: 11/26/2024 6:17 PM

Available backups
Select the date of a backup to use for recovery. Backups are available for dates shown in bold.

November 2024						
Sun	Mon	Tue	Wed	Thu	Fri	Sat
					1	2
3	4	5	6	7	8	9
10	11	12	13	14	15	16
17	18	19	20	21	22	23
24	25	26	27	28	29	30

Backup date: 11/26/2024
Time: 6:17 PM
Location: New Volume (E:)
Status: Available online
Recoverable items: [Local disk \(C:\)\(Sele...](#)

< Previous **Next >** Recover Cancel

Clicar em Next;

Selecionar Desktop e Clicar em Next;

Clicar em Next;

The screenshot shows the 'Specify Recovery Options' window of the Windows Recovery Wizard. The window has a title bar with 'Recovery Wizard' and a close button. On the left is a sidebar with a list of steps: 'Getting Started', 'Select Backup Date', 'Select Recovery Type', 'Select Items to Recover', 'Specify Recovery Options' (highlighted in blue), 'Confirmation', and 'Recovery Progress'. The main area is titled 'Specify Recovery Options' and contains three sections: 'Recovery destination' with radio buttons for 'Original location' (selected) and 'Another location' (with a text box and 'Browse' button); 'When this wizard finds items in the backup that are already in the recovery destination' with radio buttons for 'Create copies so that you have both versions' (selected), 'Overwrite the existing versions with the recovered versions', and 'Do not recover the items that already exist on the recovery destination'; and 'Security settings' with a checked checkbox for 'Restore access control list (ACL) permissions to the file or folder being recovered'. At the bottom are four buttons: '< Previous', 'Next >' (highlighted with a mouse cursor), 'Recover', and 'Cancel'.

Clicar em Recover;

Esperar e Clicar em Close;

Verificar no Ambiente de Trabalho se o ficheiro de texto lá está!!

Parabéns concluiu um Backup com sucesso.
